UGR - Unified Glare Rating

The UGR method (Unified Glare Rating) is an international index which is used to evaluate and limit the psychological direct glare from luminaires.

Contrary to previous methods where the glare was rated using the luminance values of a single luminaire, this method calculates the glare of the entire lighting installation at a defined observer position.

According to BS EN 12464, the UGR (Unified Glare Rating) reference value is provided for a standard room.

Maximum UGR in offices - UGR19

ALL-LED Flat Panels can be used in lighting schemes to achieve UGR19.

Examples:

UGR<10% glare so insignificant it can be ignored, UGR>30% very high glare.

2' x 2' Recessed, Surface & Suspended

Description

The ALL-LED Generation 4 ultra-thin LED panels feature high efficiency, quality and performance. These luminaires are designed with edge-lit technology to produce highly efficient lighting, which provides pleasant and uniform light distribution with no glare. The luminaires have a clean, modern look and the ultra-thin profile makes them unique and an ideal solution for either drop ceilings or suspended in offices, schools, hospitality and other commercial applications. Their high CRI is ideal for retail stores and showrooms where natural color rendering is essential.

The ALL-LED edge-lit flat panels offer lower power consumption, longer life, dimming option and lower overall maintenance (no re-lamping required) are therefore an excellent energy efficient replacement. Compatible with most 0-10V dimmers.

IES files available on the ALL-LED USA website.

Features

- A range of high energy-efficiency edge-lit LED flat panels for office and commercial lighting applications
- Suitable for installation in T-bar suspended ceilings. Optional drywall, surface mount or suspension kit accessories are available
- Easy installation & maintenance free
- PMMA light guide material and PS diffuser, for even light distribution with 120° beam angle.
- PMMA will not discolor.
- Ultra-thin white profile frame – depth just 0.39"
- Total depth including the driver box 1.96"
- CRI>80
- High power factor - 0.90
- ALL-LED'S dimmable panels provide a simple 0-10V solution that is compatible with stand alone 0-10V dimmers as well as larger lighting control systems and allows for installation with daylight or occupancy sensors
- **Compatible with Lutron 0-10V Dimmers**
- Operating temperature -4°F to 104°F
- Available color temperatures 3500K, 4000K, 5000K
- Suitable for damp locations
- DLC (DesignLights Consortium®) certified
- (L70) at **50,000 hour lifetime**
- **5 Year warranty**

LED Flat Panel Accessories

Description

ALL-LED'S flat panel mounting accessories provide additional versatility for our flat panel range when installed in locations other than suspended ceilings.

The suspension kit allows for panels to be suspended for a more architectural look.

The drywall and surface mount kits are designed to allow ultra-thin LED Panels to be installed in sheet rock / concrete ceiling applications. These accessories provide an ideal mounting solution in offices, schools, hospitality and other commercial applications.

Suspension Kit Includes

4 x 6.5ft steel cables, cable grippers and fixing screws | Adjustable up to 6.5ft in length

Dry Wall Flange Kit

Pre-assembled kit, fixing screws included

Surface Mount Kit Includes

8 x pattress connection screws for assembly | 6 or 10 ceiling mounting screws depending on size ordered | 4 x pattress sides for assembly onsite

Emergency Panel Solutions

A full range of slimline edge-lit LED flat panels providing flexibility of sizes, wattages, mounting options, as well as an emergency capability.

EMERGENCY PANEL

Product Description

ALL-LED Generation 2 Edge-lit LED Flat Panels are now available with an emergency LED battery pack that provides minimum 90 minutes of operation at approximately 25% output, backup in the event of a power failure. The emergency option is available in both dimmable and non-dimmable versions for 1' x 4', 2' x 2' and 2' x 4' panels.

Product Features

- Provides adequate backup lighting in the event of an emergency
- Minimum 90 minute operation after a power outage
- Meets or exceeds all National Electric Code and Life Safety Code Emergency Lighting Requirement

Product Specs

- Operating Temp 32° - 122° F
- 24 hour re-charge cycle

Suitable for installation in grid ceilings in new construction and retrofit installations

May also be drywall, surface mounted or suspended

Emergency option available

Ideal for use with daylight sensors to adjust to change in light levels and space requirements

Design Criteria

- The lighting calculation information displayed above is indicative for the areas and design criteria indicated
 - It is recommended that the customer carries out his own calculations to verify that the estimated quantity using this grid system does in fact provide compliance with the project specification
 - All quantities shown are calculated and rounded upwards and then determined into an amount that offers a suggested grid pattern for intended installation
 - ALL-LED will not accept responsibility for lighting installations which fail to comply with specification, where the above grid system has been solely used to estimate quantity
- 1 Fc (FootCandle) = 10.764 Lux -
For above calculations - 27Fc = 291Lux / 46Fc = 495 Lux
All dimensions are in Feet.
Ceiling Height is assumed @ 10ft
Reflectances are assumed @ Ceiling = 70 / Walls = 50 / Floor = 20
Maintenance Factor assumed @ 0.85
Working Plane assumed @ 2.50ft
